

INTERNATIONAL GROUP EGYPT

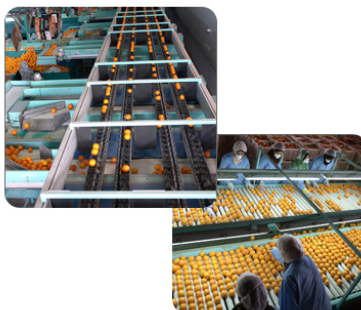

We founded in 1995, established mainly to cultivate and produce Egyptian fresh agricultural products earmarked for exportation to international markets. Our farms are located in Qalyubeia, the heart of the richest citrus producing geographical region in Egypt, which is about 50 Km away from Cairo, and includes approximately 30,000 acres specific to highest grade citrus cultivation.

our main focus and it is our best quality that enables us to enter rigorously in international markets. The Company's foundation, vision, mission and operational strategy is built upon the Company's shareholders and senior management commitment to building in-house expertise in the agricultural quality assurance field. Our farms are grown and cultivated according to international quality standards and our farms include a fully equipped packing house.

Our vision is centered at becoming a global market player in the fresh agricultural export market, such a global positioning would be made possible by meeting and maintaining substantial and sustainable quality standards as well as certifications translated into operational action and efficient production processes.

PACK HOUSE

- Packing plant is responsible for washing, sorting, waxing, drying, grading and packing citrus products, and it operates with a capacity of 25 ton/hour.
- Automated wax applicator that works by means of traveling nozzles that sprays wax and other chemicals according to the citrus quantities passing by the applicator. All chemicals used in the treatment of oranges comply with the internationally accepted chemicals, specifically; OPP, TBZ, and IMAZALIL.
- The sizing process is highly precise and performed by the most modern electronic seizer from SAMMO, Italy (one of the biggest firms specialized in the production of citrus packing lines worldwide). Such an accurate vision system sorts out oranges according to their size and weight, thus ensuring maximum customer satisfaction.

Our main products

Navels

It has a "belly button" at the blossom end, leading to the common name of "navel orange." It is a table fruit

- **Description:** large and medium sized seedless round table fruit. It is juicy and deep orange in colour with thick skin that makes it easy to peel and section for eating.
- **Quality:** Grade 1
- **Sizes:** 42-48-56-64-72-80-88
- **Season:** De-greening : October - November
Natural color: December - March

Degreening of Naval Oranges

Why degreening?

Degreening means getting rid of the green color and allowing the orange color of the peel to predominate.

The external color of citrus fruits is more often related to climatic conditions than to internal maturity. In the beginning of the citrus season in Egypt, some cultivars still have an external appearance of immaturity with a green peel, but are in fact internally mature. The external appearance of the citrus is used by the consumer as an indication of quality and the green colour is associated with immaturity. Thus, degreening is becoming an effective method for improving the visual quality of mature citrus and preparing it for the consumer.

When does the degreening process becomes effective?

Only when oranges become internally mature, the degreening process becomes effective, since this process has only an external effect. Maturity levels are detected through undergoing laboratory tests that shows:

a) Sugar content b) Juice Content c) Acidity level

Degreening Process

In the degreasing process, oranges are stacked in isolated degreasing rooms and are exposed to the optimum climate conditions required for reaching the natural coloration all over the 24 hours of the day. Thus, the undesirable green color turns to orange in few days. Producers can operate and manage their degreasing facilities in such a way that they can produce a product of high quality. This is successfully achieved by an accurate control and monitoring of temperature, humidity, ethylene, ventilation and air circulation.

Valencia

Mainly used for juice extraction. It is also a table fruit in the 2nd place. Valencia is a late-season fruit, and therefore a popular variety when the navel oranges are out of season.

- **Description:** Medium to small sized seedless round fruit. It has a thin skin, and an interior bright orange color, with very high juice content. It is the last orange variety to be picked.

- **Quality:** Grade 1
- **Sizes:** 56-64-72-80-88-100-113-125
- **Season:** February - June

Baladi

An Egyptian Variety of an unidentified origin, but with an extensive production in Egypt. It ripens in the begging of the citrus season and it is considered to be a good substitute for Valencia Oranges. Mainly used for juice extraction and extensively required in Western Europe for juice factories.

- **Description:** Small to Medium sized seedy fruit. It has a smooth and thin skin, well colored and high juice content.
- **Quality:** Grade 1
- **Sizes:** 56-64-72-80-88-100-113-125
- **Season:** December - February

Sweet Orange

It is a sweet orange variety that holds high levels of sugar content in the fruit. It is mainly a table fruit but also sometimes used in juice.

- **Description:** Small sized fruit with seeds and with high juice content.
- **Quality:** Grade 1
- **Sizes:** 56-64-72-80-88-100-113-125
- **Season:** December - February

Adalia Lemon

Lemon is the leading acid citrus fruit because of its very appealing color, odor and flavor.

- **Description:** Medium to large sized fruit. They have firm, oily and smooth-skin and heavy for their sizes. They have a bright yellow color, an elongate shape; having more length than width and possess abundant juice.
- **Quality:** Grade 1
- **Sizes:** 80-88-100-113-125-138
- **Season:** December - April

White/ Red Grapefruit

The grapefruit is a large orange-like fruit that belongs to the citrus family. It is somehow a "new" addition to the family, deriving from a natural cross-breeding between orange and pomelo. It is called grapefruit simply because it grows in clusters, like grapes.

- **Description:** The fruit is nearly round to slightly pear-shaped. It has a smooth, finely dotted peel with a pale yellow colour, sometimes blushed with pink and aromatic outwardly. The pale-yellow, nearly whitish, or pink, or even deep-red pulp is segmented with thin, membranous and bitter walls, which is very juicy and acid to sweet-acid in flavor when fully ripe.
- **Quality:** Grade 1
- **Sizes:** 30-36-40-48-56-64-72-80
- **Season:** December - April

Citrus packing

We supply our citrus varieties from our lands "Sarhan Farms" following the international standards and qualities. Open-Top trays and Telescopic Cartons as well as Bins can be produced according to the variety and the size of the fruit being packed.

- **Citrus Packing:**
 1. 15 Kg Net – 16 Kg Gross Cartons
 2. 7 Kg Net – 8 Kg Gross Cartons
 3. 500 Kg Bins
- **Container's Capacity:**
 1. Number of Pallets/Container: 20 Pallets/ 40' reefer
 2. Number of Cartons/ Pallet: 80 cartoons/ pallet (15 kg Cartoon packing)
 3. Number of Cartons/ Container: 1600 Cartons (15 kg Cartoon packing)
 4. Number of Cartons/ Pallet: 168cartoons/ pallet (7 kg Cartoon packing)
 5. Number of Cartons/ Container: 3360 Cartons (7kg Cartoon packing)
 6. Number of bins/ pallet: 2

Red Seedless Grapes

- **Description:** Berries are rounding, seedless, firm and sweet, with a very good crisp texture. Excellent variety for fresh eating and commercial purposes.
- **Quality:** Grade 1
- **Season:** June - August

- **Grapes Packing:**

1. 5kg Gross / 4.5 Net Plastic Boxes
2. 180 Plastic Boxes / Pallet - 20 Pallets/ Container 40'
3. 3600 Plastic Boxes / Container
4. 16.2 Tons (Net) / Container

White Seedless Grapes

- **Description:** Elongated seedless berries with bright green color, thick skin and crisp firm texture. It is one of the world's most popular varieties due to its excellent eating quality and good shelf life.

- **Quality:** Grade 1

- **Season:** May - July

- **Grapes Packing:**

1. 5kg Gross / 4.5 Net Plastic Boxes
2. 180 Plastic Boxes / Pallet - 20 Pallets/ Container 40'
3. 3600 Plastic Boxes / Container
4. 16.2 Tons (Net) / Container

Pomegranate

The pomegranate was first cultivated by the Ancient Egyptians; for they do best in climates with long, hot and dry summers and cool winters. That's why Egypt provides a very good base for its cultivation resulting in a very high quality fruit.

- **Description:** It is round and often slightly edged with a smooth, leathery skin of an orange yellow to dark red in color when ripe. The interior is separated by membranous walls and white, spongy and bitter tissues into compartments packed with sacs, filled with sweetly acid, juicy, red, pink or whitish pulp. The seeds, juice and pulp are eaten, but the yellowish membrane is too astringent.

- **Quality:** Grade 1

- **Sizes:** 8-10-13-15

- **Season:** September - October

- **Packing:**

1. 5 Kg (Gross) / 4.5 Kg (Net) cartons
2. 200 Cartons/ Pallet – 20 Pallets/ Container 40'
3. 4000 cartons/ Container
4. 18 Tons/ Container

Golden Onions

Onions are high in energy and water content. They are low in calories and have a generous amount of B6, B1, and Folic acid. Onions increase circulation, lower blood pressure and prevent blood clotting.

- **Description:** It is a variety of dry onion with a strong onion flavor, white inside and its layers of papery skin have a yellow-brown color.
- **Quality:** Grade 1
- **Sizes:** Small - Medium - Large
- **Season:** March - June
- **Packing:**
 1. 10kg, 15kg, 20kg, 25kg
 2. 18 tons/ Dry 40 reefer Container

Red Onions

Onions are high in energy and water content. They are low in calories and have a generous amount of B6, B1, and Folic acid. Onions increase circulation, lower blood pressure and prevent blood clotting.

- **Description:** These onions tend to be medium to large in size and have a mild to sweet flavour. They are often consumed raw, added for colour to salads, and grilled or lightly cooked with other foods.
- **Quality:** Grade 1
- **Sizes:** Small - Medium - Large
- **Season:** June - August
- **Packing:**
 1. 10kg, 15kg, 20kg, 25kg

2. 18 tons/ Dry 40 reefer

Potatoes

Our potato production line is one of the largest potatoes' production lines in Egypt as we use the most recent technology in farming and cultivating, also we use fertilizers with high quality in order to produce high quality potatoes.

all our farms are pest free areas (PFA) in accordance with the European Union Regulations

We receive the raw materials directly through our farms under strict supervision from highly qualified agriculture engineers to ensure that we prevent any bad residues to enter our production lines.

Presence of curvature used to provide clean and healthy potatoes free from diseases and corruption.

- **Varieties of Potatoes**

Fresh Potatoes: Spunta, Mondial, Nicola, Diamont.

Processing (Industrial) Potatoes: Diamond, Hermes, and Lady Rosette.

- **Sizes (Diameters)**

Lady Rosetta: 40-75 mm

Spunta: 40-60 mm

Nicola: 35-65 mm

Diamont: 40-60 mm and 60-up

- Packing**

We have various types of packing:

1250 Kg in Jumbo Bags, Loose Backing

25 Kg & 10 Kg in Propylene (PP) bags, palletized

25 kg & 10 kg Gott

- Export Season**
